Low and Slow Oven Brisket

260 min · Serves 8 · 572 kcal a serve · Video 16:38 · Ketogenic Woman

Just beef, salt and pepper: each serve gives about 48 g protein and is very rich in zinc and vitamin B12, with good iron too. Pouring off the rendered fat trims some richness, but it is still high in saturated fat, so keep the rest of the day lighter.

Diet notes: Keto (0.1 g net carbs a serve).

Method TIMES = THE MOMENT IN THE VIDEO

1. Take the brisket out of the fridge a couple of hours ahead. Heat the oven to 250°F and pat the meat dry with paper towel. 1:15
2. Score the fat cap in a criss-cross pattern with a sharp knife, then rub salt and pepper all over the meat. Sear it on all sides first if you like. 3:17
3. Place it fat-side up in a roasting pan, seal tightly with foil and bake about 1 hour per pound (about 4 hours for this size) until very tender. 7:40
4. Lift off the foil and pour most of the rendered fat into a heatproof jar (the cook drained about 2 cups from this size). Keep it: it is tallow for future cooking. 11:41
5. If you didn't sear it, slide the brisket under a hot grill (broiler) for 2–5 minutes to crisp the top. Cover loosely with foil and rest, then slice across the grain. 12:54

> **Tip** Serves about 8 (our estimate, from the size). Keeps 4 days in the fridge; reheat slices in a covered pan with a spoonful of the juices. A slow cooker also works before a quick blast under the grill.

The method is a summary in our words — the video shows every step.
